

In-Class Exercise 2: CSS Frameworks

Intro to Bootstrap

Today, we'll be doing a hands-on exercise to introduce you to Bootstrap, a widely-used CSS framework. The goal of this exercise is to demonstrate how Bootstrap enables rapid web development and prototyping. I will be guiding you through styling a pet sitting service website by using different Bootstrap components to create a webpage during class.

In the provided index.html, you'll find the text content and image names. Download the corresponding images. Your task is to integrate the text and the images into the appropriate Bootstrap components to build the webpage. This exercise is designed to show you how quickly you can start building a UI with a CSS framework without having to write all the custom CSS from scratch.

The exercise is meant to be fun and give you a quick introduction to how powerful and efficient Bootstrap can be. We will be covering only the basics in class, but I encourage you to explore Bootstrap on your own and perhaps polish up the project afterwards. Play around with the different component styles and see how quickly you can prototype designs using Bootstrap's grid system and pre-built components. Have fun with it!

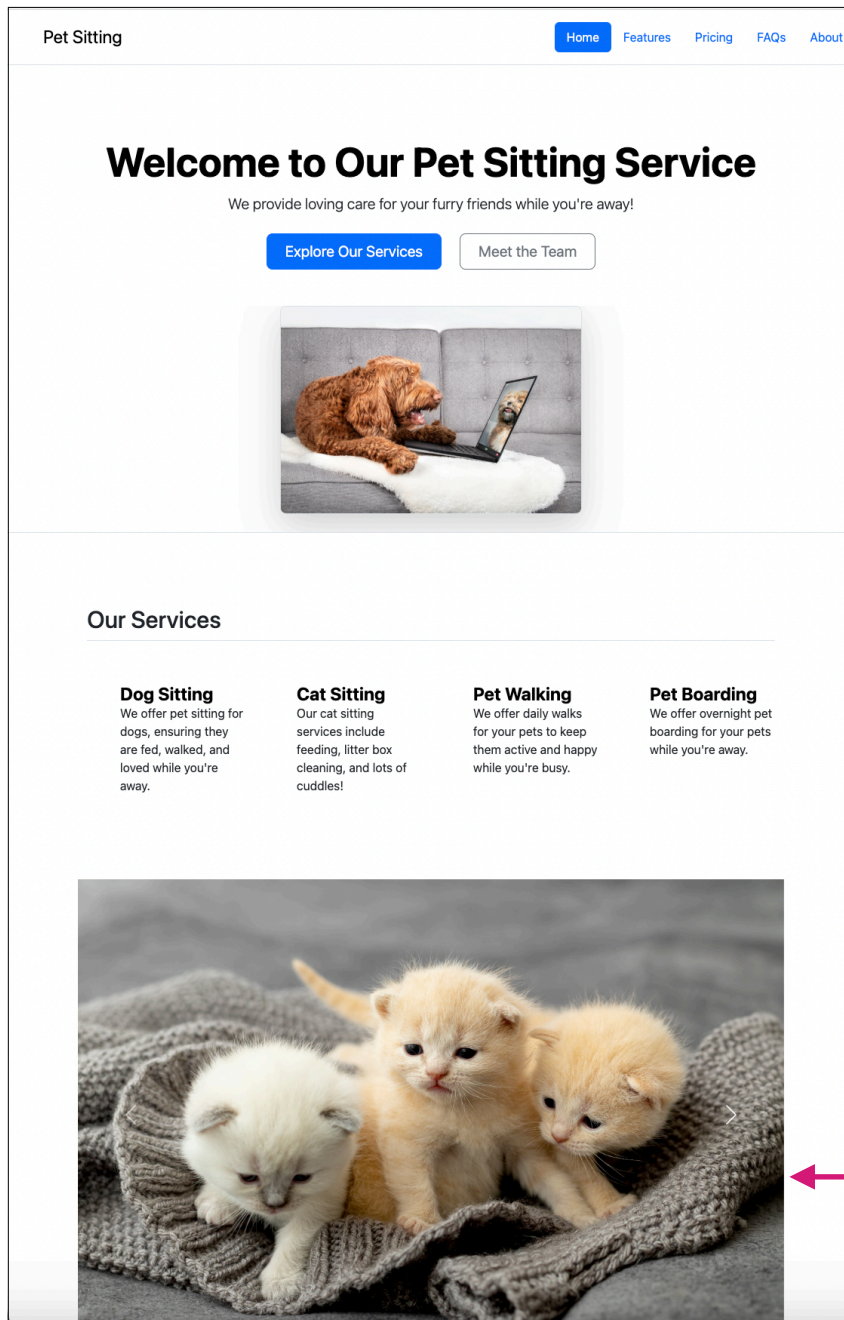

Your Tasks

- **Get Bootstrap:** Go to the official Bootstrap website (<https://getbootstrap.com/>) and copy the CDN links for Bootstrap's CSS and JavaScript. Paste these links into the **<head>** section of the index.html file for the CSS, and just before the closing **</body>** tag for the JavaScript.
- **Navbar:** Start styling the page by adding a navigation bar to the top of the page. Choose a Bootstrap navbar style to structure your site's navigation.
- **Hero Section:** Next, implement a hero section to introduce the pet sitting service.
- **Services Section:** Add a section that describes the key services provided by the pet sitting business.
- **Carousel:** Include a carousel featuring pictures of pets. Use Bootstrap's carousel component to cycle through 3 images showcasing happy pets in different environments, reinforcing the message of your services.
- **Dark Mode:** Enable Bootstrap's dark mode class by adding `data-bs-theme="dark"` in `<html>`

Submit your Solution

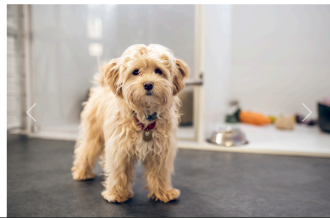

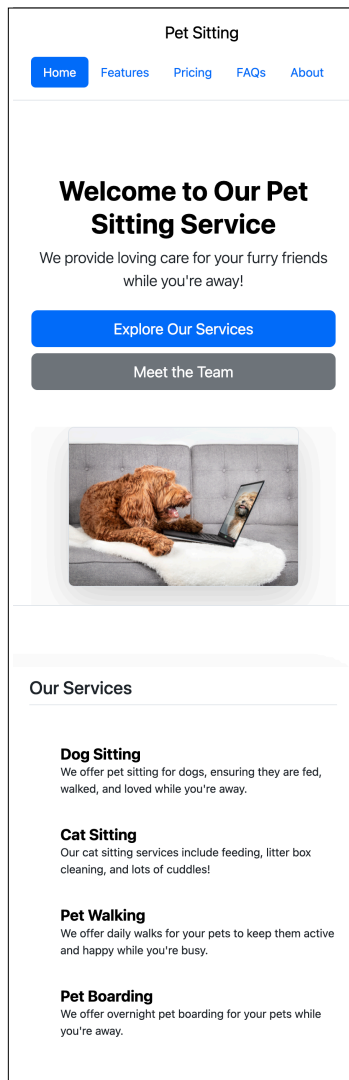

To submit, compress the necessary files into a ZIP archive and name it as follows: `<first name>_<last name>_inclass2.zip`
